EDUCATION

PES University	Aug 2019 – Jun 2023
B.Tech	6.0
PVP Polytechnic	2019
Board of Technical Examinations	78%
Carmel High School	2013
State Board	48.8%

PROJECTS

AI Assisted Recommendation System

Nowadays, students are provided services like career counseling or career guidance by many companies/websites. They also provide tips for aspiring undergraduate students through psychometric tests. But none of them provide college recommendations. The needs and requirements of every student are unique. Therefore, the recommender system should be able to provide recommendations that consider opinions from the student community as a whole as well as the user's individual preferences. The system developed in this paper uses a combination of various technologies from the web intelligence domain. The front end of the system is developed using AngularJS and it was chosen because this system was developed as per requirements by 'nSmiles' because this system has been developed in collaboration with 'nSmiles'. The database layer is implemented using MongoDB which is a NoSQL database. The server which receives requests and sends responses is developed using technologies or libraries in Python. To develop API, Flask was used which is written in Python. To calculate recommendations pandas and 'scipy' libraries in Python were used.

PERSONAL SKILLS

- Outside the box thinker, can come up with creative solutions that can be a real asset in any role.
- Has the capability to guide teams and steer the team members toward the achievement of goals.
- Adaptable to any situation. Can work in a dynamic and flexible environment.
- Possesses great analytical and problem-solving skills. Ability to think rationally and thoughtfully.
