Profile

Very passionate about being part of IT organization where I get to learn bunch of new things, work in a team environment and use my full potential to contribute to company goals. I am a B-Tech computer science student with 75% score in academics. (not bad 😊) I have exposure in Core and advanced Java HTML, CSS and JavaScript for now. I wish to learn plenty of new technologies and be a honest contributor giving myself all possibilities to learn and grow along with team driving towards the company's vision

Project Details

Playstore App Rating Prediction

Make a model to predict the app rating based on size,type, price, content rating and genre of an application using Machine learning data mining algorithms like :

- KNN algorithm
- Random forest regression algorithm

SMS Spam Detection

Used machine learning algorithms to analyze message content and metadata to determine the likelihood of a message being spam.
