Nationality: Indian

WORK EXPERIENCE

Software Developer

Trust System & Software

Jan 2023 - Present

- Collaborated with a team of developers to design and implement interactive web applications using JavaScript and VB.NET, enhancing user experiences and engagement.
- Assisted in the creation of stored procedures for optimized data retrieval and manipulation, contributing to faster application performance.
- Assisted in the identification and resolution of bugs and issues, contributing to the ongoing improvement of application reliability and performance.
- Collaborated with UI/UX designers to implement frontend designs, refining HTML and CSS skills and adapting designs to responsive layouts.
- Developed and implemented CRUD (Create, Read, Update, Delete) operations for database management utilizing stored procedures within SQL Server.
- Demonstrated proficiency in reporting solutions by designing and generating Crystal Reports to visualize complex data sets and present insights to stakeholders.
- Played an integral role in enhancing the user experience by embedding Crystal Reports within the application interface, allowing users to access relevant reports directly.
- Successfully developed a transaction page using VB.NET, by implementing credit and debit grids within the transaction page.
- Successfully designed and implemented a dynamic grid view that allowed users to seamlessly import and visualize Excel data, improving data analysis capabilities.
- Demonstrated proficiency in data manipulation and presentation by developing a feature to bind Excel data to a grid view using JavaScript and VB.NET.
