10 TH	-	Kendriya Vidyalaya,NFC Nagar,Hyderabad	CBSE Board	8.8 CGPA	2012

Projects:

Done field work on the topic “**Factors affecting age at Menarche among women in Managundi village, Dharwad**” in MSc Anthropology.

The main aim of this study was to establish its methodology, the perspective nature of the study allowed me to investigate the factors which influence age menarche. So, in

this study 200 women were taken into consideration of two communities that is Panchamsali and Walmiki. The result was found that mean age at menarche is 12 years from both the communities in this study among women. This age at menarche is influenced by socio-cultural factors such as dietary intake, physical activity, and psychological aspects. Even the information about social customs following was taken as one of the factors from which we came to know that most of the people that are around 83% of the women follow social customs during menarche and also the information about how these social customs are followed was taken. The lowest age of menarche is 11 years and the highest age of menarche is 15 years among the samples were found. Most importantly the age at Menarche is declining.

There was a conclusion that there is a definite association between mean age at menarche and bio social factors and mainly the three main factors that is dietary or nutritional factor, physical activity, and psychological factors. There is interrelationship found between these factors.

Skills:

- Done Specialization in Biological Anthropology.
- Computer skills like Microsoft word, Microsoft excel, Microsoft PowerPoint, Internet Browsing.
- Good analytical teaching, learning and typing skills.

Personal Strengths:

- Learning agility and effective personal communication skills.
