Work History

2017-08 - Current

Senior Software Developer

Infovisionlabs, Pune

- Collaborated with project managers to select ambitious, but realistic coding milestones on pre-release software project development.
- Updated old code bases to modern development standards, improving functionality.
- Developed software for mobile operating systems.
- Discussed issues with team members to provide resolution and apply best practices.
- Designed reusable and reliable code for use within distributed cloud environments.
- Developed clear specifications for project plans using customer requirements.
- Participated in software field testing to verify performance of developed projects.

2015-09 - 2017-08

Jr. Software Developer

Epicomm Technologies Pvt. Ltd., Pune

- Collaborated with project managers to select ambitious, but realistic coding milestones on pre-release software project development.

- Updated old code bases to modern development standards, improving functionality.
- Discussed issues with team members to provide resolution and apply best practices.
- Participated in software field testing to verify performance of developed projects.
- Developed clear specifications for project plans using customer requirements.
- Developed software for mobile operating systems.

Projects

a. US based telemedicine application

This app is for providers. It includes features like show call history with list of medications provided to patients, a telemedicine video call, chat, take snapshots, view recorded telemedicine videos, invite user and see live status of the invitation, handling notifications. My role was to create a chat screen, take snapshots and view snapshots, create video call screen, update live status of the invitation.

b. Critical alert application

This critical alert system which includes gps based periodic background location updates and notifications handling for critical alerts. It includes native app and Web page communication and data transfer handling between them.

c. Society management application

This society management application has all the society management related features including group chat, uploading/downloading of different media files, payment gateway, maps, search places on map, update users live location. My role was to implement maps, search and to update live location, create sign in and sign up screens.

d. Bikers application

It is an app designed specially for bikers where one can create a group of bikers in the app and schedule a ride. It has features like live locations updates on map. one can see all the group members live locations on the map while riding. Also payment gateway integration and many more. My role was to create a screen with custom tab bar.

Education

Master of Computer Applications

Savitribai Phule Pune University - Pune
