Description:

Medline warehouse operations deals with creation of dashboard based on user requirements to get better inside of business. This project contains branch related data of warehouse. To handle the business and look deeply into growth and performance of each branch of warehouse we develop visualization, charts, graphs in the form of dashboards based on data available in the database.

Responsibilities:

- Designing, developing, and maintaining business intelligence solutions.
- Presenting information through reports and visualization.
- Understand the requirements and functionality of the application from specifications.
- Understanding requirement from senior management, operations engineers, and analyst to develop tableau dashboards for operations to improve warehouse KPIs across the organization
- Designed, developed, tested, and maintained Tableau functional reports based on user requirements.
- Worked closely with Business users. Interacted with ETL developers.
- Created different KPI using calculated key figures.
- Worked extensively with Actions, Calculations, Maps, and table calculations.
- Hands on building Groups, hierarchies, and sets to create detail summary reports and Dashboard using KPIs.
- Utilized Tableau server to publish and share the reports with the business users.
- Worked on creating SQL, Oracle queries required to fetch specific data
- Created and edit SQL queries within Tableau to build data sources and calculated fields.
