1 Years of experience in Java backend developer on Spring Boot based applications. Well versed with the entire software development life cycle (SDLC). Experienced in working with versioning tools like GIT. Knowledge of MySQL as Database. Good command in writing SQL queries.

Key Skills

- Java • JEE • Spring • SpringBoot • Microservices • Spring JPA • PostgreSQL • Hibernate • JSON • XML • MySQL
- Tomcat • Eclipse • Jenkins • Kafka

Project Summary

AlphaDot Technologies Pvt Ltd

Sep 2022 – Present

Software Engineer (Sep 2022 - Present)

Project: JVH(James Villa Holiday)

Role: Java backend developer.

Description: JVH is an application designed to facilitate villa bookings across various locations in Europe. Users can access the application and browse through a wide range of villas available in different countries, regions, and cities. The application provides users with villa ratings and reviews to help them make informed decisions. Bookings can be made for a minimum duration of one week.

Technology stack: • SpringMVC • Java • MySQL • SVN(TortoiseSVN) • IntelliJ • JSP • JavaScript • CSS • Jenkins • Jira • GTM(Google Tag Manager)

Responsibilities:

- Collaborated on integrating feefo reviews into the search, destination, and accommodation pages of the application. This integration allows users to view ratings and reviews for villas.
 - Fixed issues related to the calendar availability feature, ensuring smooth and accurate functionality.
 - Addressed and resolved issues regarding redirection, particularly those impacting villa ratings.
- Prioritized and worked on P1 Jiras to ensure the continuity and revenue generation of the business.
- Actively participated in identifying and resolving bugs and issues, conducting thorough testing and debugging to maintain a high-quality application.

Project: Cyepro

Role: Java backend developer.

Description: Automobile Showroom application offers client digitalization of process including enquiry ,invoice, delivery and other stages based on microservice basedspring boot application

Technology stack: • Java (J2SE) • SpringBoot, • JPA • Microservices• MySql• Postman• Git• Jira

Responsibilities:

Development of restful APIs using springboot application

Writing modular microservices based code for add order and delivery modules. Development of controller, services and JPA layer of the application.Unit testing, peer review and defect fixes

Software-skill:

Java/J2EE:	Spring, Hibernate, JSP,
Web Development:	HTML, JavaScript, CSS,
Integration:	Kafka, Postman, Swagger, JSON, XML, REST
Database:	JDBC, SQL Server, PostgreSQL, MySql
Servers:	Tomcat
Development Tools	Spring Tool Suite, Eclipse, IntelliJ
CI/CD	Git, Maven

Education and Certifications**Others-**

Completed Java Certification and training program from Universal informatics Indore.

Helped organize and attended several events in college.

Educational Background

Master Of Computer Application
Rajiv Gandhi Technical University,
Bhopal 2020-2022

Strength

Quick learner, hard worker, and a consistent team player. Good analytical and logical skills required for problem solving.

Presentations and communication to all sorts of audience, one to one or a group.

Enthusiastic team player and target shooter capability of accepting challenges.
