Profile

Enthusiastic young person looking for a challenging carrer to give effective as well as efficient effort towards attainment of organization goals with exploring wide scope of knowledge and intelligence.

Work experience

Software Engineer

12/2021-12/2022
Bangalore-India

Company: Persistent System Limited

Client: Persistent community

Responsibilities

- Responsible for collecting, and cleaning data to ensure its accuracy and usability.
- Analyzed data using statistical methods and tools to extract meaningful insights, patterns, and trends.
- Created visualizations and reports to communicate findings to stakeholders, aiding in informed decision-making.
- collaborate with teams to identify opportunities for process improvement and contribute to the development of data-driven strategies.
- The role encompasses transforming raw data into actionable information that drives organizational success.

Covid 19 project :

- In a COVID-19 project using Python libraries and Jupyter Notebook, I analyzed pandemic data to track infection rates, deaths, and recoveries
- Leveraging Pandas and Matplotlib, I visualized trends over time and across states.
- Using data-driven insights, I identified regions with high impact, assessed the effectiveness of interventions, and contributed to informed decision-making.
- Through this project, I demonstrated proficiency in data analysis, visualization, and providing actionable insights to address a critical global challenge.

Financial dashboard project:

- Created a comprehensive financial dashboard project utilizing Power BI, showcasing key financial metrics, trends, and insights for informed decision-making.
- Integrated data from diverse sources to provide a holistic view of revenue, expenses, profitability, and cash flow.
- Employed interactive visualizations to highlight KPIs such as gross margin, net profit.
- Empowered stakeholders with an intuitive tool to monitor financial performance, identify areas of improvement, and optimize resource allocation.
