## Ramya Gorthi

Senior Consultant-Automation  
Developer

**WonderBotz, LLC**

### Prior Employment

- **WonderBotz**  
January 2023 till date
- **Accenture**  
September 2021 –  
January 2023
- **Kantar GDC Pvt Ltd**  
July 2016 – August 2021

### Client

- Nonprofit global  
biological resource  
center
- American technology-  
focused defense,  
intelligence, security, and  
infrastructure  
engineering firm.
- Global biopharmaceutical  
company.
- American nonprofit  
healthcare company.

### Technical/process skills

- Blue Prism (RPA)
- UiPath (RPA)
- AA(Basics) (RPA)
- Advanced Excel
- VB.NET(Basics)
- JAVA
- C#
- HTML/CSS
- SQL

### Sectors

- Health Care
- Finance & Accounting
- Hospitality

### Education

- Bachelor of Technology  
(ECE)

### Certification

- Blue Prism AD01
- AZURE AZ-900

### Strengths

- Constant Learning
- Optimistic,
- Self-Motivation,
- Good Communication  
skills,
- Adaptability
- Determination

### Professional Experience Summary

I am a Senior Consultant in WonderBotz. I have three years of experience in Robotic Process Automation, working on multiple phases of the RPA Life cycle, including RPA assessment, designing, solutions, analysis, development, testing, and maintenance.

I am composed and keen on learning new technologies and implementing them. I have worked with clients from the US and India and have strong communication skills and a good team player attitude.

### Professional Engagement Summary

I am currently working for a US-based investment management company. I have delivered projects revolving around Text extraction and processing. She has implemented Excel, Web, OCR, and PDF Services in UiPath. Some of her projects include filling the fields and extracting the data, wherein information must be extracted from the given reports and presented in formats. Some other projects include UiPath integration with SQL.

Previously, I worked for US-based healthcare and pharma companies. Prior to that, I worked for clients in the manufacturing and hospitality sectors. I developed a claims processing automation that accepts the claims for the business, checks for the inputs with the database, and updates the team with missing data. I developed another process to manage tickets from an application and send Created automation to generate a billing backup. The bot fetches various documents from many web and desktop apps related to timesheets, invoices, expense reports, and cheque requests. It consolidates all the files as per defined rules into one single PDF and sends corresponding emails to the officials attaching files per the category mentioned for a particular case.

As a Research Operations Co-Ordinator, I worked for US Banks in analyzing data and statistics. I have also automated a process using Excel Macros, which compares the current data monthly with the previous data and highlights the odd target or missing samples. As a result, the macro increased the team's efficiency, completing the task in 2-5 minutes which manually took 3 hours for a resource.

Capable of taking care of the Team and has led the team of 5 members successfully and delivered the results with high efficiency and Zero Quality Issues. Received rewards for active and on- time delivery of the projects so far. Have contributed towards employee engagement activities and encouraged team in taking part as a team leader.

**WonderBotz, LLC**

**Jan 2023 – Present**

**Senior Consultant – Automation Developer**

- Work closely with internal teams for prebuilt production solutions.
- Work closely with Process Subject Matter Experts to prepare Process Definition Document (PDD) & Solution Design Document (SDD).

**Accenture**

**Sep 2021 – Jan 2023**

**Senior RPA Developer (Blue Prism)**

- Work with the Operations team to understand various business flows related to claims processing.
- Design and define the scope of automation.
- Prepare Process Definition Document (PDD) & Solution Design Document (SDD).
- Work with US-based Healthcare clients to enhance the performance of existing processes and build new scalable processes with reusable components to leverage across multiple processes.
- Work on process understanding and improvement, project solution, implementation, testing, UAT, and production deployment.
- Delegate work to junior developers and manage the integration of modules.
