- **S.S.C** from State Board of Maharashtra in 2005.

Project Details:

Project sequence 1

Project Name : Intelligent Virtual Terminal
Vertical : Payment ,Telecom BSS Business intelligence –Sisense BI /Dwh-etl
Technology & Tools : Database Testing , File processing , Web service testing
,job run ,Unix ,Business Intelligenc

Details project and Overview:

Through valuable data insights, led by information and payments data, a business can improve profitability, optimize revenue and cut costs. Without transaction data and analytics to get clear visibility into the payment environment, a business wouldn't be able to identify transaction performance issues, or detect fraud and other anomalies. Services would be disrupted, repair times and troubleshooting processes would also be derailed, and the risk of bottlenecks for services like online banking, POS or mobile payment networks would increase. This Payment analytics solution allow a business to take historical data and apply it to things that are happening to a business right now. This applies to sales and payment processing or any online services in the payment space. Analytics are as important to the payment industry as any business, if not more so. In order to improve user payment services and performance, it's

necessary to understand customer profiles and behaviors - as well as having insights to providers' risk profiles. This AI Based Payment solution changes the game for brick and mortar retailers. Since our solution sits at the heart of the transaction flow, It capture every detail of every electronic payment – line-item history, category and brand preferences, physical locations, time of day, frequency, and spend – made by every consumer, in every channel. This rich data is uploaded to the cloud in real time where our AI-based Engagement Engine transforms individual-but-anonymous customer profiles into segmented promotional offerings based on each shopper’s historical purchase behavior and category preferences. Segmented profiles are then correlated with targeted promotions and offers that are delivered at the point-of-sale (POS) to create an entirely new level of personalized engagement.

Project sequence 2

Project Name : - E2E Billing and Invoicing
Vertical : - Telecom BSS, Amdocs CRM
Technology & Tools : - Data warehousing /ETL , SSIS Package

Details project and Overview:

An invoice is a document that describes the goods and services that a company offers to a customer and specifies the customer’s responsibility to pay for those products and services. The New age Telcos are realizing the need to transform business and become digital telco experience providers. A Digital Telco goes beyond convergence of networks and services, it involves changes in ways CSP interact with their customer, use of Analytical intelligence and reinventing business processes that is lean, agile and ensures faster time to market keeping customer at the center of it all thus staying relevant to customers.
