PROJECT

The Payroll Management System is a simple PHP/MySQL project that manages and calculates the employee's payroll of a certain company. This payroll project can compute the employee's payroll monthly and semi-monthly. The payroll management system itself a static configuration for payroll calculation such as the number of working days of a company, which in this system, the setup is for a company that has 5 working days in a week and that's for Monday-Friday. Using the said system static configuration, this will help to calculate the number of absences and undertime of an employee in each day within the selected date range of the payroll. The payroll management system includes also the computation of different allowances and deductions of an employee and this feature of the system can be managed dynamically. Each employee will have their own setup for their allowances and deduction and also can be set as monthly, semi-monthly, and applicable only for one-time earnings or deduction.
