## Project: OVH

Over-view HRM for Employee management.

### Responsibilities

- Utilized React.js and Redux Toolkit to build a single-page application with a modern and responsive user interface.
  - Implemented features such as task creation, updating, and deletion, allowing users to easily manage their tasks.
  - Utilized React Router for handling client-side routing and providing a seamless navigation experience.
  - Incorporated Redux Thunk middleware to handle asynchronous actions, enabling smooth interaction with the backend API.
  - Conducted unit testing using libraries like Jest and React Testing Library to ensure reliable functionality and identify and fix bugs.
- 

## Project: Internship

(Jan 2020- May 2020)

“Atraket” is a solution to automate the complete fixed assets management activities of an organization. The ‘atraket’ system will automate all department activities involved in the life cycle of an asset. The operation starts from classification of assets, procurement of assets, installation and allocation, depreciation, reallocations, or transfers, retire and tracking of assets. The envisage software solution will have various decision support dashboard and reports for various MIS reports.
