College

Nagpur, Maharashtra, India

As a skilled Full Stack Developer with approximately 1 and a half years of experience, I am passionate about developing cutting-edge web applications that solve complex business problems. My primary focus is on Java, and I have extensive knowledge of working with SQL, HTML, CSS, J2EE, and JavaScript. I am also a team player with excellent communication skills, and I work well in collaborative environments.

Work experience

Software Engineer

Since January 2023 **Servosys Solutions** Mumbai, Maharashtra, India

Responsibilities:

1.0 Developed the "Return Tracker" project for a prominent client of the company, Suryoday Small Finance Bank. This project was designed to generate emails based on customer due dates for payment, providing a convenient and efficient solution for the client.

2.0 Utilized a variety of technologies to build the project, including Core Java, HTML, CSS, JavaScript, jQuery, and SQL Server.

3.0 Designed and developed the complete user interface and data storage structure, ensuring that the project met the client's requirements and specifications.

4.0 Collaborated with the client to understand their needs and provided effective solutions to meet their requirements and contributed to the development of innovative and creative software solutions that added value to the client's business operations.

5.0 Demonstrated proficiency in multiple programming languages and web technologies, contributing to the successful completion of the project.

Java Developer

From January 2022 to December 2022

Revatech Software Solutions Pvt. Ltd. Pune, Maharashtra, India

Responsibilities:

1.0 Developed hands-on experience in popular technologies like JAVA and databases, which enhanced technical proficiency and knowledge

2.0 Collected and analyzed performance data during various phases of software development, identifying areas of improvement and implementing effective solutions.

3.0 Acquired a thorough understanding of the company's standards of application software development, enabling the creation of high-quality software products that met clients' needs.

4.0 Planned, tracked, and managed deliverables on short-term sprints, ensuring timely completion of projects while maintaining high quality standards

5.0 Worked as an integral part of a team and contributed towards the success of software engineering projects with strong project management skills and the ability to work under tight deadlines.

Additional Projects

Temperature Monitoring and Sanitizing Vending Machine

March 2019 to June 2019

I designed and developed a Temperature Monitoring and Sanitizing Vending Machine to address the COVID-19 pandemic. The machine operates in three easy steps: it collects and stores data through the person's ID card, senses body temperature through a sensor, and dispenses sanitizer onto the person's hands. This vending machine is a trendy and innovative solution to monitor and sanitize people to prevent the spread of COVID-19.

Online Matrimonial Application System

December 2020 to June 2021

I worked on developing an Online Matrimonial Application System that interconnects multiple branches of a matrimonial agency. My responsibilities included developing custom software to manage and process matrimonial data, focusing on registration, workflow, customer service, customer and employee history, and near paperless operation. The system was designed to improve efficiency and streamline the overall process of matrimonial agency management.
