PROJECTS

- Currently Working in the Roche Cumulus Project under the Development team. Currently I am working in project Roche Cumulus with the frontend development team where I used javascript

and angular technology. **In** this project The client wants this application built for their Scientist research through which they can Calculate and save their experiment in that application.

This project is huge project where we are integrated multiple application

- Previously I worked in project **Case Tracker** with the frontend development team where I used javascript and angular technology. **In** this project The client wants this application built for their clients through which they can manage case workflow.

  The cases can be added to a specific queue, where each queue refers to a client.

- I did an In-house project in which I used vision API and python flask technology.

KEY ACHIEVEMENTS

- Having knowledge about GCP, JavaScript ,
  Angular , Python , Flask(framework) .
- I have worked on backend and front-end integration for web applications .
- I have Very good knowledge of healthcare and life science (HCLs) domain.
- I have written backend Rest Api for web application in Using Python and Flask technology
