- **Tools:** Jira,Postman,WinSCP,Slack

WORK EXPERIENCE

SanRadiance Technologies Bangalore Private Limited,Bangalore,India
Software Development Engineer   07/2020-Present

Project #1
Involved as a team member in developing a food delivery application. This software includes 3 options like pickup,dine in and delivery. The user can order the food and pay. The store owner can view and auto accept and print the bill.

My responsibilities include:
- Bug fixing,testing and debugging to deliver the error-free applications.
- Integration of notification features as per the requirement.
- REST API's integration ,authentication and authorization services integrations while developing modules using MVC architectural patterns.

Project #2

Involved in the design and development of a medical application,where the admin can login and check the doctors list ,along with the medical records of the patients. It also includes the Wellness check and followUps.In wellness check,monthly view of babies health is shown and In followUps the weight and length is shown in the Graph format.

My responsibilities include:
- Designed and developed user interfaces for Web Dashboard by integrating with backend REST API's,
- Testing and debugging to provide bug free applications.
- Involved in the deployment of the application.

Project #3

Involved in the design and implementation of community based mobile apps for children to connect , communicate, based on interest, hobbies in a community under parental control.

My responsibilities include:
- Development of UI .
- Integration of Backend Services.
- Unit Testing.
- Deployed the project in testing and production server .

Project #4

Involved in developing a corporate website, which helps the users to know about the brand and its recent activities performed over the globe.

My responsibilities include:
- Worked as Team Lead under this project.
- Architectural Design, Design & development of user interfaces.
- Backend Services integrations,Bug fixing and deployment for testing.
