- Design and develop static or dynamic components based on the requirements from product owner

Project 2 || TradeFi App

Role: Software Engineer

Description: TradeFi is an exclusive Trade Facilitation platform that is transforming traditional commodity trading to a new-age agri fintech model. It provides a robust platform for various participants in the agri-supply chain. This comes with the added security of physical commodities at Origo managed warehouses. TradeFi leverages a wider financing partner ecosystem beyond traditional channels, thereby creating access to quick, secure and low-cost capital

TradeFi model is powered by blockchain that maintains the highest standards of transparency and security across all its operations. A distributed ledger technology that provides a shared record of transactions to all the participants in the system. Our system maintains the highest standards of security for all transactional details and related data.

TradeFi gives access to real-time information including inventory, prices, receivables, contracts, and other details. Through a blockchain-enabled mechanism, we ensure higher efficiency with enhanced data management, lower transaction cost, optimized logistics and better traceability.

Responsibility:

- Development UI React
- Creating reusable component.
- Creating TradeFi Dashboard UI (Doughnut Charts, Bar Chart, Table) using React Charts .js
- Created new Report tab in side navigation and created UI for report As soon as you enter the client name, warehouse, location and date, the report will be downloaded in excel.
- Using of Rest API for fetching Data from multiple sources
- Development of React component by using Functional Components
