Academic Projects Undertaken :

Student Information System

Description:
In this project, the student information is classified into three modules i.e. login module, administrator module and student module. The login module is used for entry to the website with provision of various functions and facilities. In the administrator module there are two parts: one is for entry, update or deletion of student. The second part is for issuing notices, internal results etc. In the student module, once the student enters his id and password, he can access other pages. If profile view is clicked, he can update his personal detail.

Software Used:
The software used to design this project is the Java-2 Enterprise edition (J2EE). In this, every component can be selectively designed and a multi-layered distributed application model. It's a secured software and flexible in nature too. SQL tool is also used in this java project.

Project Overview:
The objective of this project is to manage data and all details of students. Main purpose of this project is to reduce paperwork and one can easily access the data at any time.
